Allowable Subject Matter

I. The following is an examiner's statement of reasons for allowance:

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Flanders et al. disclose a method describes an authentication technique for use between a first communication unit, such as a subscriber unit, and a second communication unit, such as a fixed network communication unit, wherein the first communication unit modifies an ID, known to both the first communication unit and the second communication unit (such as a serial number), using data as one enciphering key and a second ID (such as a Personal Identification Number--PIN) as the other enciphering key.

Brown et al. disclose a method and apparatus for authentication between a subscriber unit and a communication unit of a communication system. The authentication is accomplished by providing a first subscriber unit identifier, first shared-secret data, second shared-secret data, a random challenge, and instant-specific information to the subscriber unit and the communication unit.

Pitiot disclose to preclude the reading of authentication key(s) contained in a mobile radiotelephone station by electronic means.

Amin et al. disclose a system and method is provided for detecting fraudulent use of a unique identifier associated with an authorized mobile station in a wireless telecommunications network.

Art Unit: 2683

Park discloses a method of managing mobile station operational parameters is disclosed in which a mutual authentication between a mobile station and a network is performed.

Patel disclose a method of strengthens authentication protocols by making it more difficult for handset impersonators to perform call origination using replay attacks.

Therefore, all of the above prior art fails to disclose forming a first fault information item in the first communication subscriber using a fault detection data item of the first communication subscriber and an information item relating to a random data item which has been transmitted to the first communication subscriber by a second communication subscriber in the communications network; transmitting the first fault information to the second communication subscriber by the first communication subscriber.

Claims 1-11 are cancelled.

Claims 12-30 is allowed based on Dent et al. in view of Oka [US 6091945] and also preserved by Applicant's response filed on 11/22/04.
